

CHICAGO BUSINESS ACTIVITY INDEX – July 2018

CBAI increased in May

The Chicago Business Activity Index (CBAI) increased to 101.6 in May from 97.2 in April. The increase is mainly attributed to the positive manufacturing and nonmanufacturing job growth and an improvement in expected retail sales.

In May, the national and regional economies presented mixed features. The Federal Reserve Board announced industrial production edged down 0.1 percent in May after rising 0.9 percent in April. Manufacturing production fell 0.7 percent in May, largely because truck assemblies were disrupted by a major fire at a parts supplier. Capacity utilization for the industrial sector decreased 0.2 percentage point in May to 77.9 percent, a rate that is 1.9 percentage points below its long-run (1972–2017) average. The Chicago Fed reported that the Chicago Fed National Activity Index (CFNAI) went down to -0.15 in May from +0.42 in April. In the Chicago region, employment in the manufacturing increased 0.14 percent and employment in the nonmanufacturing sector increased 0.18 percent in May. Employment in the construction sector decreased 0.50 percent and retail sales are estimated to have increased 0.51 percent during the same period.

In the coming months, the national economy is likely to stay on the expansion phase. The economic growth reflected in the CFNAI-MA3 suggests that growth in national economic activity is above its historical trend. Total nonfarm payroll employment increased by 213,000 in June, and the unemployment rate rose to 4.0 percent. Considering recent national economic conditions and movements of projected CBAI, the Chicago economy is expected to continue its expansion trend over the next several months.

Note: All series are seasonally adjusted.

The Chicago Business Activity Index (CBAI) is a monthly statistic that measures the changes in the business cycle status of the Chicago metropolitan area. The CBAI leads the local business cycle by three-to-four months. REAL's approach to constructing this index, using the principal components regression method, directs attention to the relationship between local and national business cycle.
